

# Game Audio Event List Template

## Slack Alert Guide

To send alerts to your Slack workspace when an event is marked as “In [Middleware]” or “In Game”, follow this guide

Shortly after you open the spreadsheet, a custom UI dropdown called “Slack” will appear:

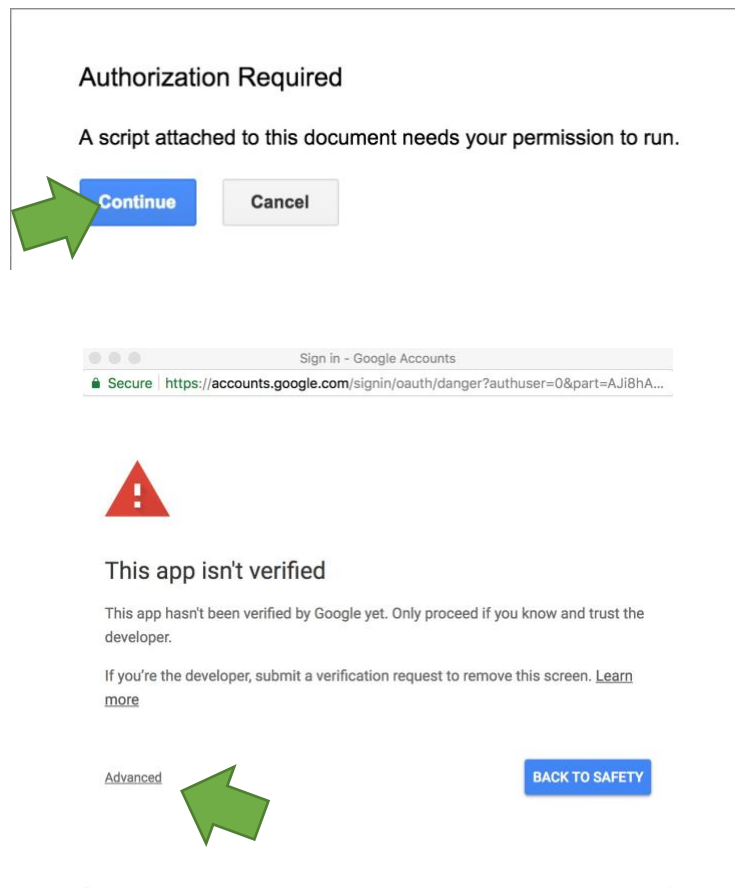

### Game Audio Event List 2.0

File Edit View Insert Format Data Tools Add-ons Help **Slack**

Under this menu, navigate to Slack>Settings>Toggle Slack Alerts.

When you first run a google script, you need to give permission. Google’s permission process is lengthy, so here’s screenshots of what to click:

## This app isn't verified

This app hasn't been verified by Google yet. Only proceed if you know and trust the developer.

If you're the developer, submit a verification request to remove this screen. [Learn more](#)

[Hide Advanced](#)

BACK TO SAFETY

Google hasn't reviewed this app yet and can't confirm it's authentic. Unverified apps may pose a threat to your personal data. [Learn more](#)

[Go to GameAudioCode \(unsafe\)](#)

## GameAudioCode wants to access your Google Account

 thomasrparrish@gmail.com

This will allow **GameAudioCode** to:

-  View and manage your spreadsheets in Google Drive 
-  Allow this application to run when you are not present 
-  Connect to an external service 

### Allow GameAudioCode to do this?

By clicking Allow, you allow this app to use your information in accordance to their terms of service and privacy policies. You can view or remove app access in your [Google Account](#)

CANCEL

ALLOW

Now that permission has been given for the code to run, you will be asked if you want to activate Slack alerts for the spreadsheet. You can toggle the alerts at any time, and you only need to grant permission the first time that the script is run. Hit “Yes” to continue.

×

Use Slack Alerts?

Would you like to use Slack alerts for this Spreadsheet? You may turn Slack alerts off at any time from this same menu.

Next, you will be asked for the webhook URL used to send data between websites. Follow these steps to get your incoming webhook URL: <https://api.slack.com/incoming-webhooks>

Once you have generated an incoming webhook URL, enter it into the dialog box below:

×

Enter your Slack 'incoming webhook' URL

Next, you will be asked for the name of the channel within your Slack workspace that you would like messages sent to. I would recommend creating an #audio-updates channel so that people who don't need these updates can still keep up with other audio-related discussion. Enter the channel name into the dialog box below:

×

Enter the name of the Slack channel you would like to send updates to (no '#')

If the information you have entered is correct, you should now be able to receive Slack alerts when the status of an audio event is changed to “In [Middleware]” or “In Game”.
